This collection is available on ISO’s Online Browsing Platform (OBP)
www.iso.org/obp

The OBP is a one-stop shop where you will find the entire collection of ISO International Standards as well as related material such as international symbols, terms and definitions, and country codes.

Subscribe now

With a yearly subscription to this online collection, you are guaranteed:

• Your personal library where you will find your selected portfolio of standards
• Easy navigation through embedded links to other documents
• Multiple language interface that lets you reach identical sections of a document in other language versions
• Access from any device as long as you have an Internet connection

Access all standards in just one click
www.iso.org/iso/obp-Aluminium

Whether you are a producer or supplier of aluminium, this collection is just for you. It contains standards developed by our technical committee for materials used in the production of primary aluminium, which also include standards for alumina, pitch, coke, electrode, ramming paste and fluorides.

What industry will use the collection?

• Metallurgy, primary aluminium electrolysis

Which sectors are covered?

• Laboratories and purchasing departments,
• producers and traders of aluminium metal, alumina, calcined petroleum coke, coal tar pitch, cathode bottom blocks, carbonaceous linings, ramming paste

How you can benefit

• Easy-to-understand technical know-how based on reliable materials data, to aid your business decisions
• Help with eventual complications of property data resulting from incompatible standards
• Concrete advice for addressing environmental and health issues related to aluminium
