   • Issue Management Program
   • Kroll Trust Center

5. Feedback and Questions
Sustainability is good for Business

• As organizations of all sizes reevaluate strategy as a result of the Covid-19 pandemic, it’s clear that deploying technology is key, both for accelerating economic recovery and ensuring we do so in a sustainable way.

• Many organizations across the world are already using innovative technologies to achieve more sustainable ways of working and reshaping the benefits of their endeavors.

• At KROLL a focus on sustainability has been a predictive indicator of the firm's performance.
Building Sustainable Future

• At Kroll we used Technology to fuel sustainable transformations.
• We deployed solutions to resolve business challenges by either enhancing their digital platform and infrastructure, improving their work and operations, and/or making an impact for the society and ecosystem surrounding the companies.
• The approach from KROLL has been to develop product, application and processes which are tech-enabled while addressing our sustainability challenges and track the benefits and full potential of technology solutions to reach our sustainability goals.
Sustainability Roadmap

Quantify Firms Baseline

Understand Alignment

Analyze Future Scenarios

Set Goals

Report Progress

Finance Ambition

Get comprehensive carbon footprint data to quantify greenhouse gas emissions across your global value chain.

Examine your firm’s carbon intensity goals and learn if you are on track with alignment to the Paris Agreement, limiting global warming to 1.5 to 2 degrees Celsius.

Uncover risk scenarios, reveal transition pathways, and optimize sustainability opportunities with in-depth intelligence.

Set meaningful science-based business targets aligned with global climate goals, including the Paris Agreement and net zero.

Respond to investor demands for transparency with detailed reporting that aligns to best practice standards.

Take steps to evolve your firm’s impact and align with environmental, social and sustainability goals.
Sustainability Standards you should Know!

Whether you’re in the beginning stages of making your firm more sustainable, or have already made some headway, your company could benefit from using sustainability standards. From an economic perspective, the standards may help you increase your productivity and efficiency. From an environmental and social standpoint, using standards can help you ensure that your firm is increasing its positive impact on the world. There’s a lot to know when it comes to sustainability standards. The best-known and most widely-used sustainability standards, including:

1. Global Reporting Initiative (GRI)
2. Sustainability Accounting Standards Board (SASB)
3. ISO 14001
4. Integrated Reporting

The standards alone are not enough, you also need to set sustainability goals. That’s why we will look at:

1. Sustainable Development Goals (SDGs)
2. Science-Based Targets initiative (SBTi)
Thank You
